Re: Notice of Alteration – Glenboro, MB – License 1712 RR

Dear Krystal,

Further to the notice of alteration submitted to your attention on October 22, 2014, this letter is to request constructional approval for the Crop Production Services (Canada) Inc. Glenboro, Manitoba facility, located on the NW ¼ of 34-6-14 WPM in the Rural Municipality of South Cypress.

This application includes:

- A hard copy of the new license proposal, and
- CPS site plan drawing.

The target date of construction for this project is August 31, 2015. Please contact me to indicate if you will not be able to review and approve this application in time for this deadline.

If you have any questions regarding this notice of alteration request please direct any questions to myself.

Sincerely,

A handwritten signature in blue ink that reads "Randi Cyr".

Randi Cyr
Manager, Operations Compliance

Crop Production Services (Canada) Inc.
Glenboro, MB

Site Information

This property is located on the NW ¼ of 34-6-14 WPM in the Rural Municipality of South Cypress and is currently owned by Crop Production Services (Canada) Inc (CPSC). A copy of the land title was included with the notice of alteration that was submitted on October 22, 2014.

Changes Within the Development

This Notice of Alteration is to request constructional approval to perform a number of upgrades to the site to increase capacity and to improve the existing containment system. The site currently includes one 90 tonne fiberglass, two 90 tonne metal, one 200 tonne Novid stainless steel, and three 40 tonne poly tanks which totals to a maximum capacity of 590 tonne of various bulk liquid fertilizers. All tanks are located within one secondary containment berm.

At this time, CPSC would like to notify Manitoba Conservation that it intends to replace the two 90 tonne metal tanks with two 200 tonne Novid stainless steel tanks.

Also, at this time CPSC would like to notify Manitoba Conservation that it intends to increase the current concrete inload pad (16' x 112') for the dry fertilizer plant to 26' x 124'.

The current plans are for construction to commence on August 31, 2015.

Maps, Drawings, Site Plans, etc.

A site plan showing the additions and deletions in red has been attached for Manitoba Conservation's files.

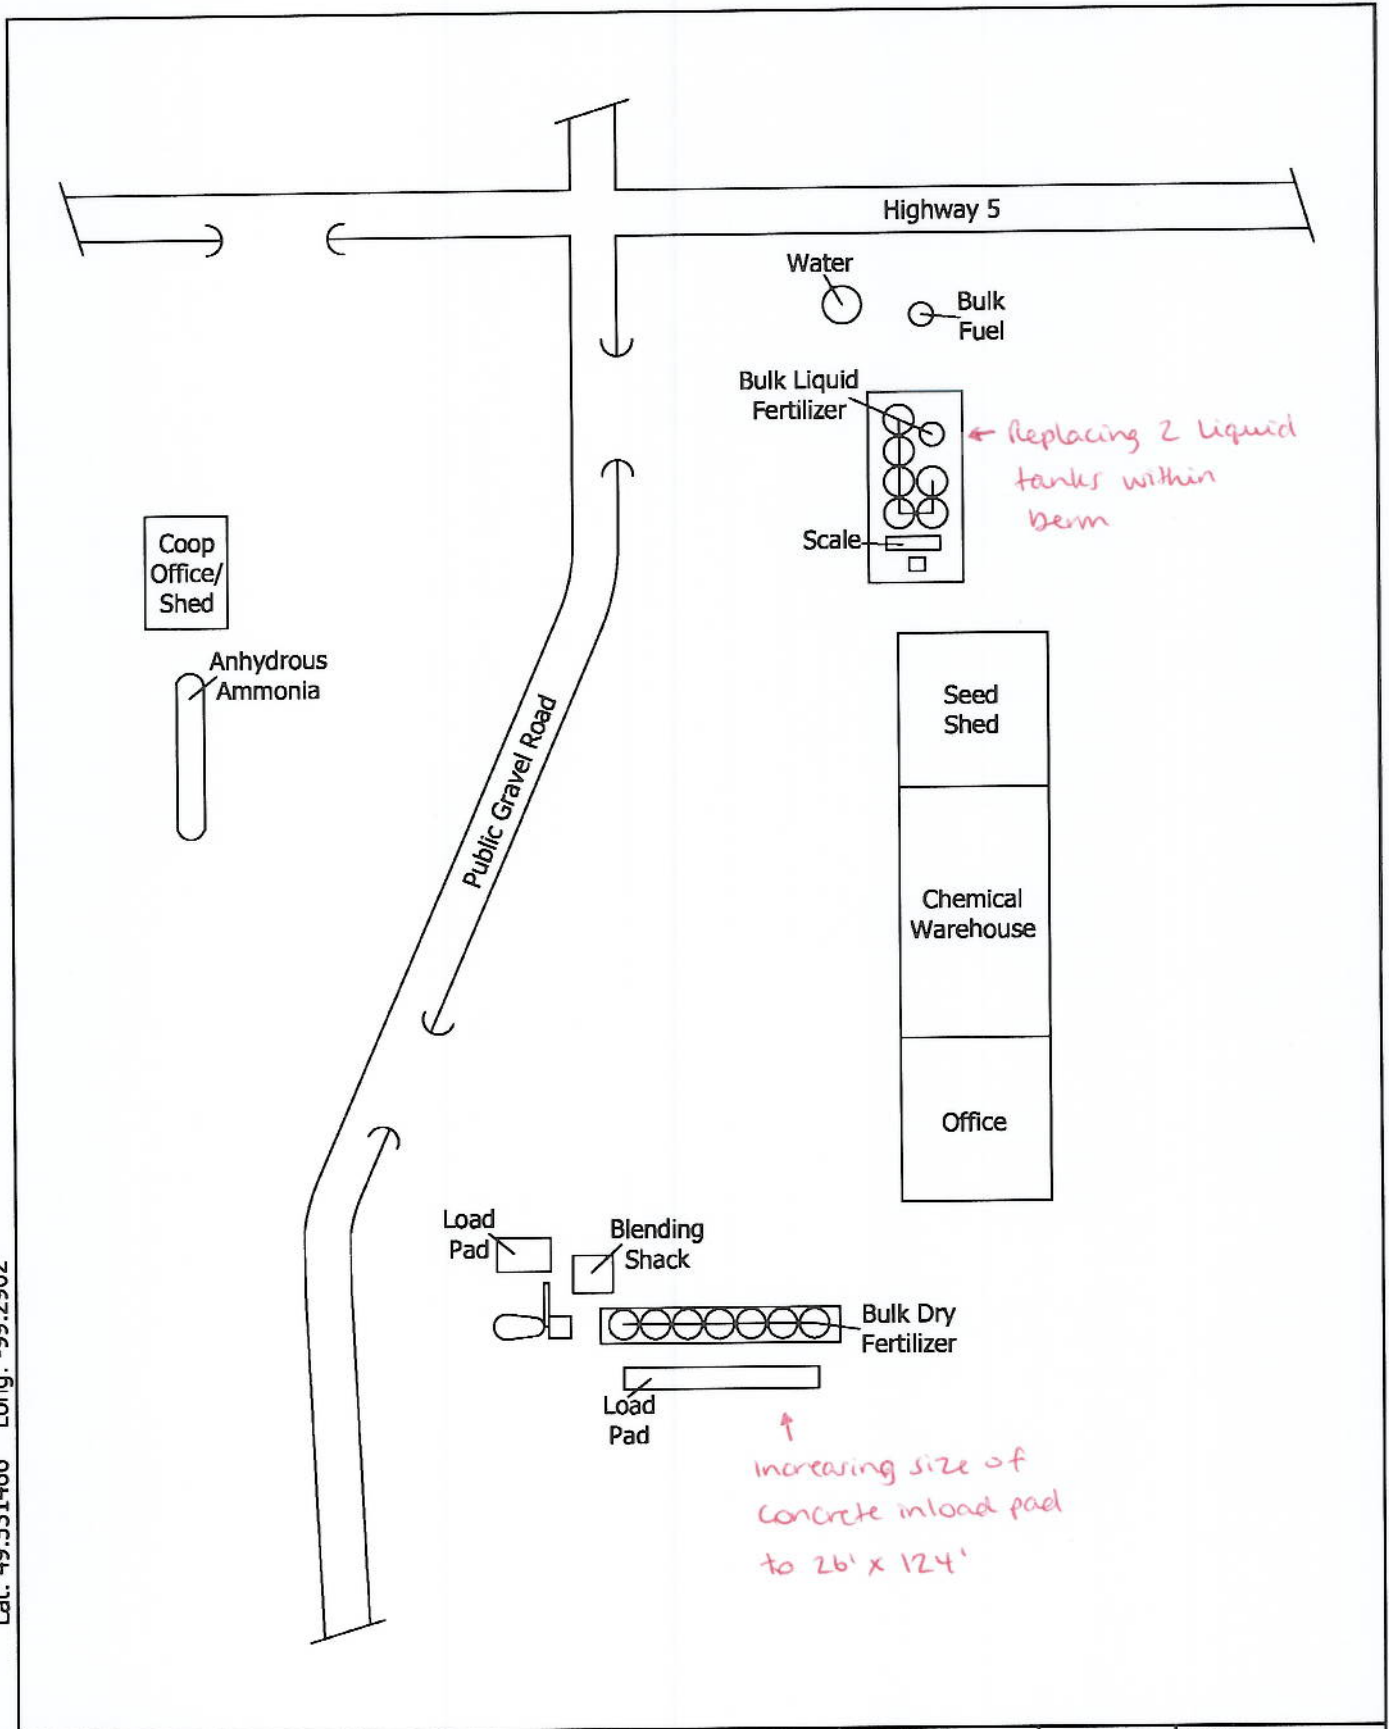

Identification and Quantification of Changes to the Type or Quantity of Raw Materials or Substances Used or Processed

Total available liquid fertilizer storage will increase from 590 tonne to 810 tonne.

Quantification of Change in the Environmental Effects as a Result of the Alteration

With the increase in capacity, no significant changes in the environmental effects are anticipated from the alteration of this development. While we are increasing the size of the largest tank on site, the containment berm was sized to contain a potential leak from the largest tank plus 25 percent.
