I have reviewed the proposal for the waste oil space heater and associated storage in Churchill and have the following comments.

The proposal states:

“Transport of waste oil will be done by a Town of Churchill truck which will have a license to transport hazardous wastes. Transportation will be minimized by this project as only the glycol will be shipped to southern Manitoba instead of both waste oil and glycol.”

I expect that other hazardous wastes are being shipped out and assume this is just an oversight. However, I remind the Town of Churchill that paints, chemicals, many cleaners, fluorescent light bulbs and many other products and materials are considered Hazardous waste and must be shipped to a recognized receiver.

I have no other concerns with respect to the proposal. Recent inspections have demonstrated the extent of the Town of Churchill’s commitment to waste management and the system was impressive. The regional office applauds this new addition to Churchill’s waste management system and is eager to see it in action.
